

## MeKo is now called MeKo Manufacturing

Expert for laser material processing celebrates the 30th company anniversary

Sarstedt, September 08, 2021

**Dr. Clemens Meyer-Kobbe founded his laser-cutting company in 1991. This year, MeKo has its 30th company anniversary. To celebrate its birthday, the contract manufacturing company is getting a new company name and a modern corporate design.**

Dr. Clemens Meyer-Kobbe founded his laser-cutting company on **May 1, 1991. For the past 30 years**, MeKo has been a successful service provider in the world of laser material machining. With over 250 employees and a huge range of machining processes, MeKo has established itself as a multifaceted component manufacturer and has built a strong reputation in its market.

A few months ago, **Dr. Jakob Dohse** joined the management team and has been tasked with managing the expansion of our sites and the digitalization of business and production processes. As the husband of Dr. Meyer-Kobbe's eldest daughter, the continuation of the company in family hands is guaranteed.

Long ago our company was registered in the German Commercial Register with its official name "MeKo Laserstrahl-Materialbearbeitungen e.K.". Since this time, MeKo has expanded significantly and offers now much more than just laser machining. To reflect this fact, the company officially adopted the modified, international name of "**MeKo Manufacturing e.K.**"

The MeKo logo has remained unchanged for most of the company's existence, with only minor tweaks to the color and layout. So to mark the company's anniversary, our logo and all our promotional material has been given a modern design. The new official name is also incorporated into the new logo. As well as the official main company logo, we have also developed the new branding "**MeKo MedTech**" for the medical technology division and the branding "**MeKo MetalWorks**" for the industrial and sheet metal division.

We are also celebrating our company anniversary with the opening of a new extension to our premises. The new building will provide additional **2400 square meters (26000 sqft.)** of space for cutting-edge production processes, research and administration. The extension is scheduled for completion in **November 2021**.

## MeKo Manufacturing e.K.

MeKo is a global ISO-certified contract manufacturer specialized in laser material processing for the medical industry. The company has 30 years of experience, particularly in the field of laser cutting of stents, heart valve frames and other medical products made of metal (NiTi, 316LVM, L605) or bioresorbable materials (Mg, polymers). MeKo offers a variety of post-processes such as mechanical workmanship, annealing and electro-polishing.

Foundation: 1991

Employees: More than 250
